

Progress in last week:

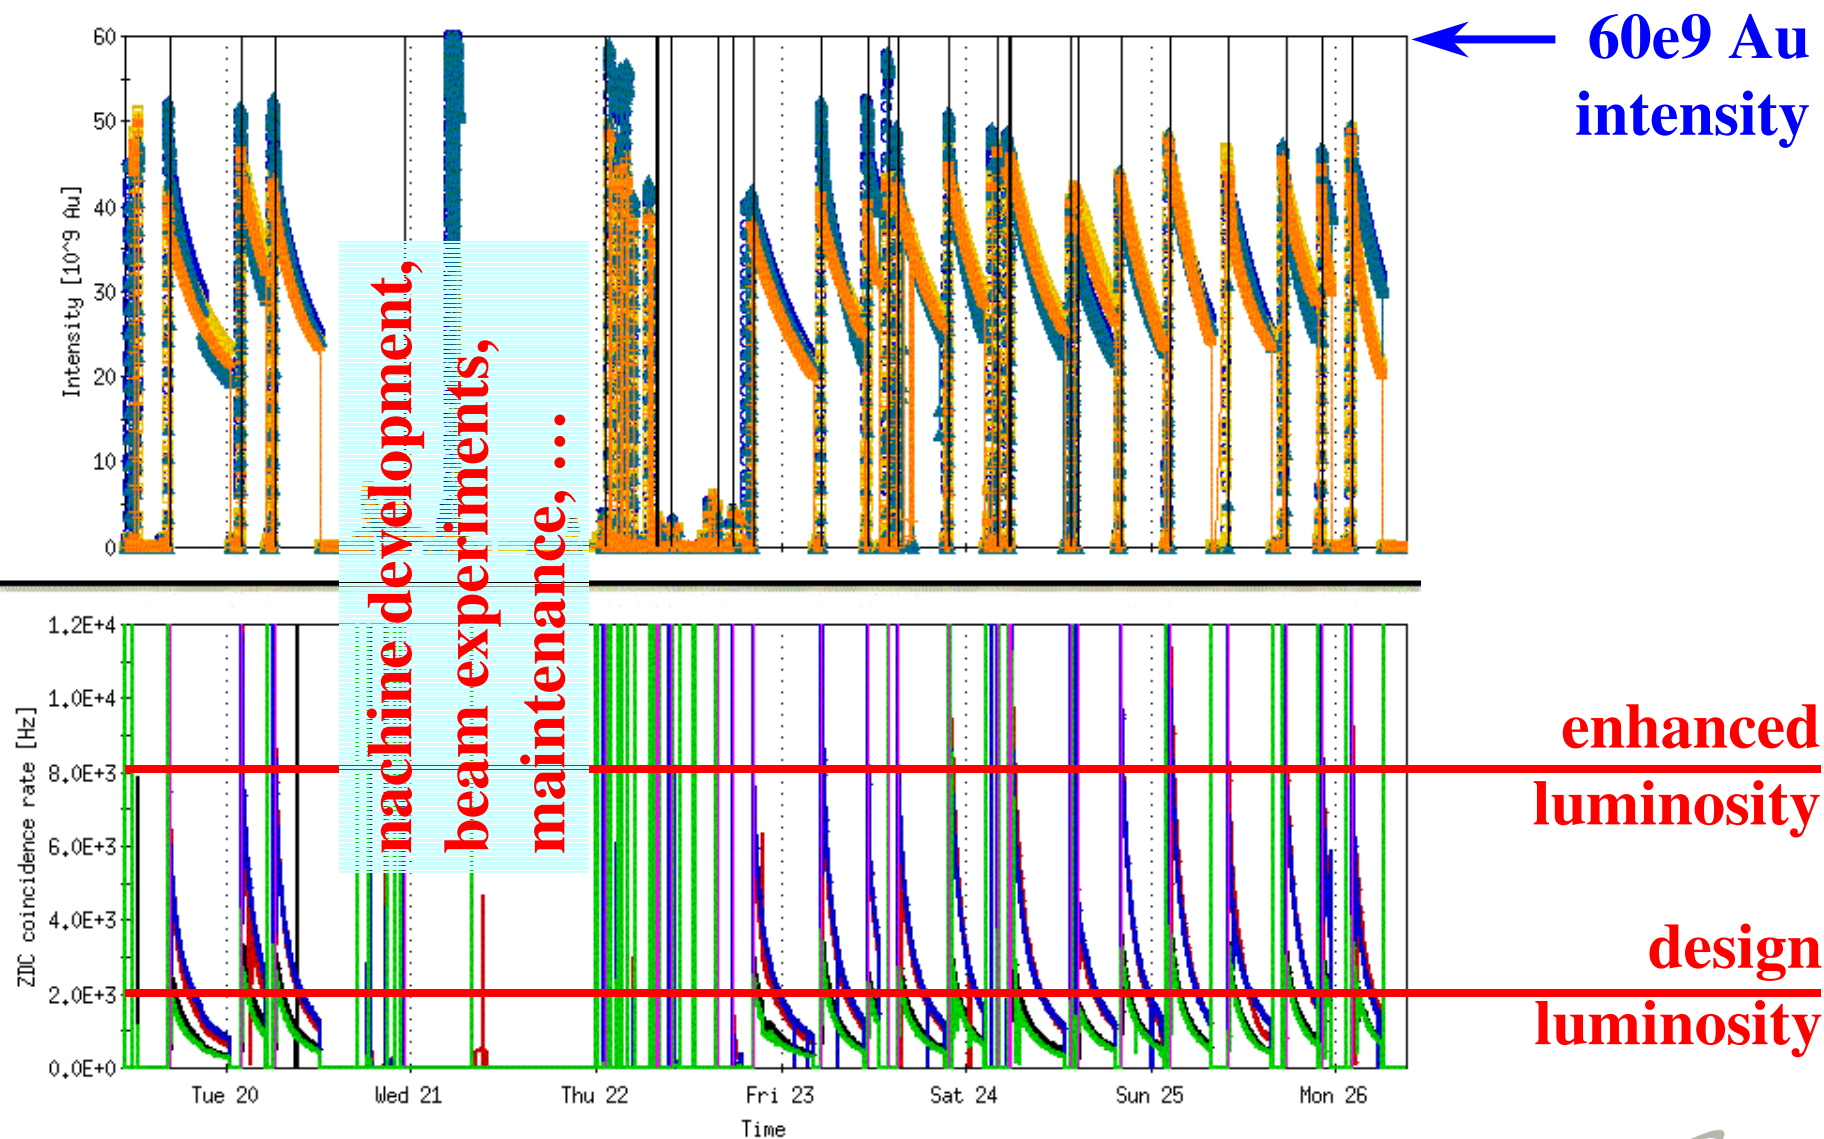

1. Improved rebucketing
(M. Blaskiewicz et al.)
→ May have triggered
background problems in Phobos
2. Fast collimation,
about 5min (A. Drees)
3. Smoother operation

Problems in last week:

1. Configuration change
2. Phobos background
→ Changed to 56x56 bunches

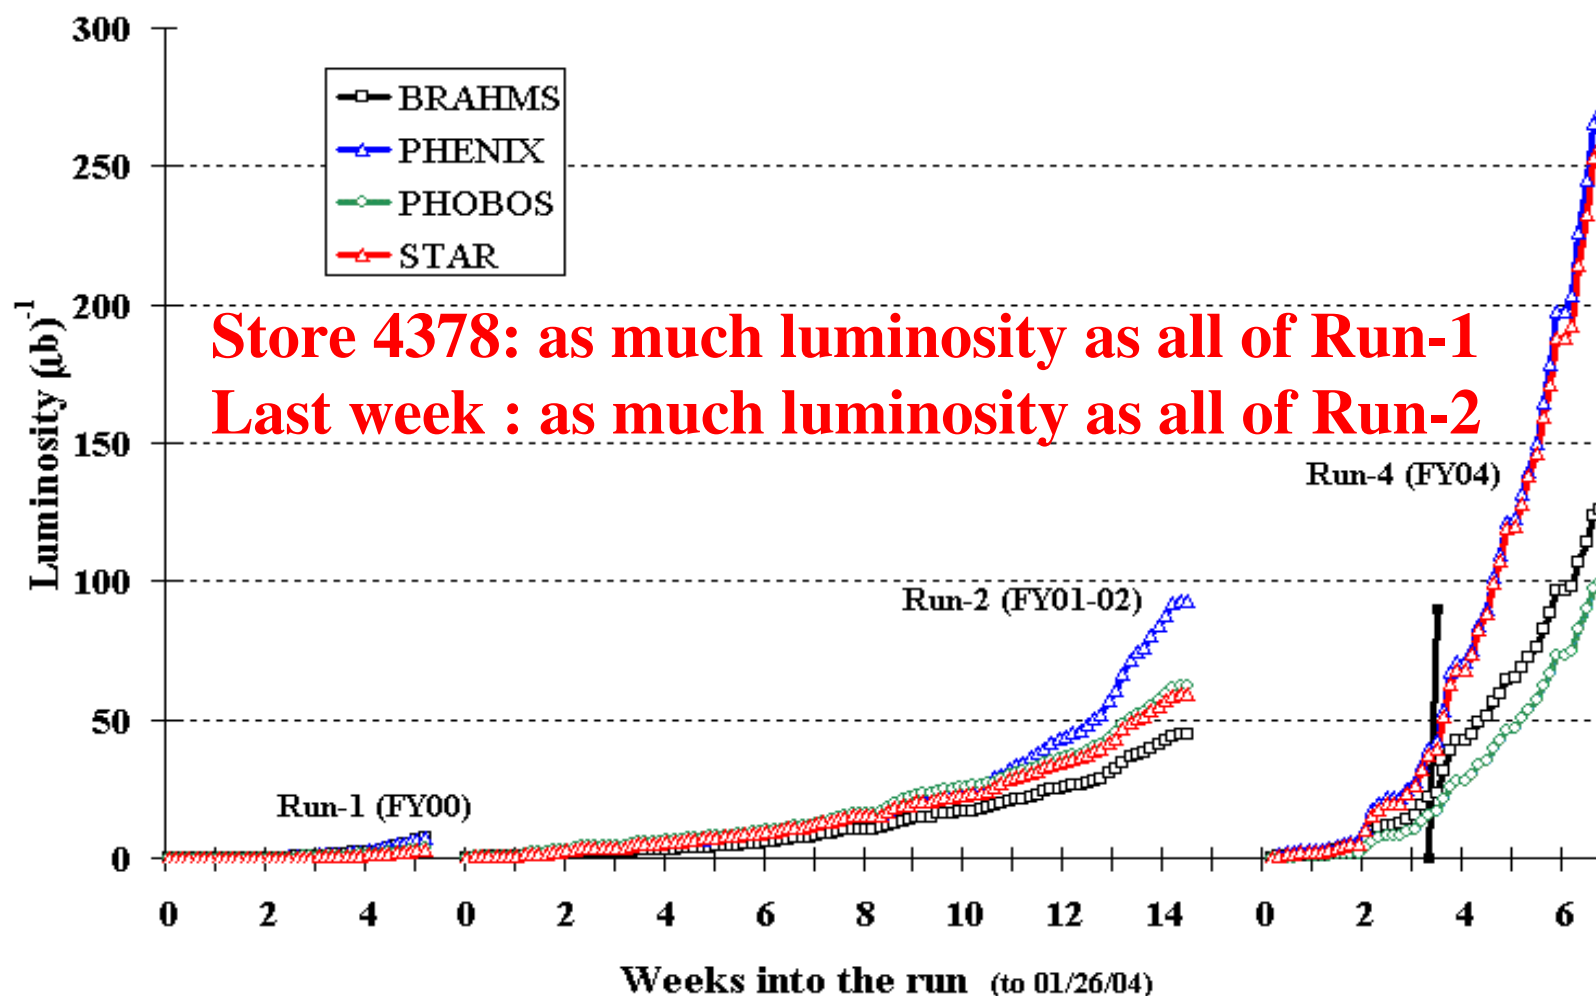

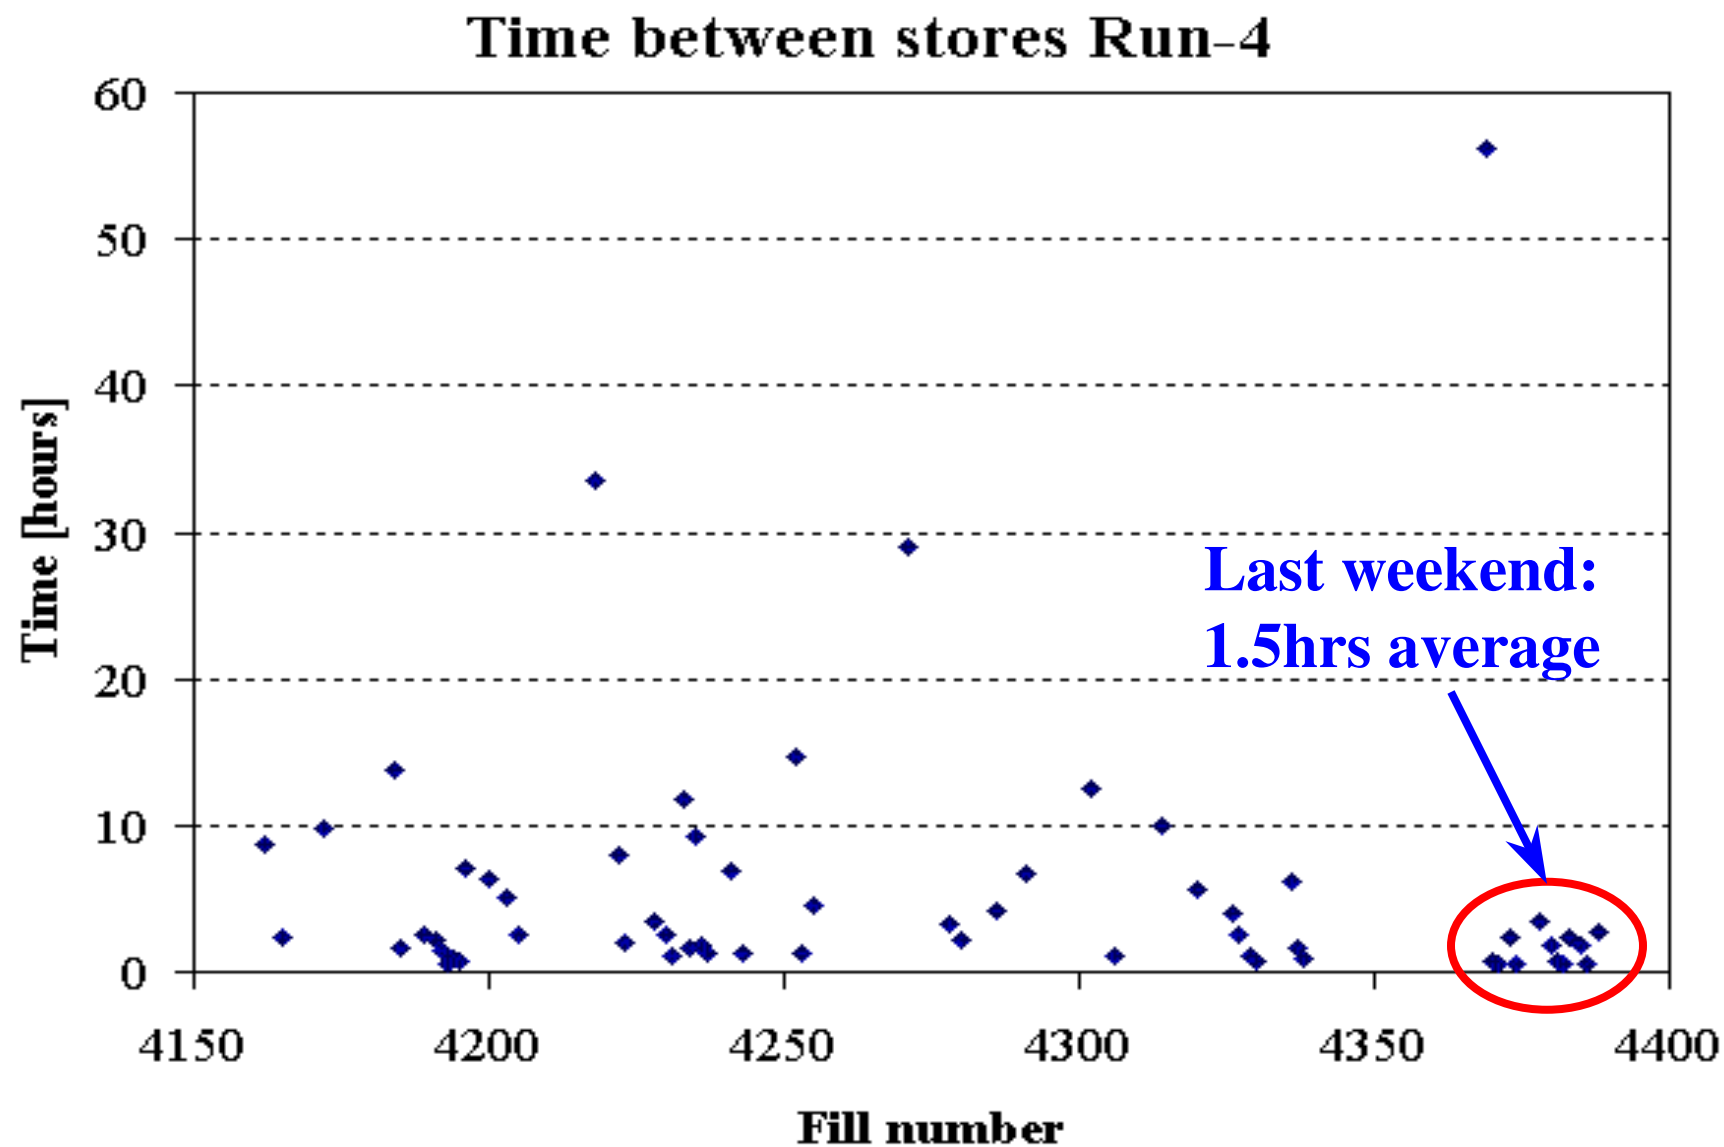

Stores during last week, Monday to Monday

Delivered $269.8 (\mu\text{b})^{-1}$ to Phenix [week ago: 182.5]
 91.1 $(\mu\text{b})^{-1}$ last week [week ago: 72.7]
Target 330 $(\mu\text{b})^{-1}$

Star $\times 0.9$
 Phobos $\times 0.3$
 Brahms $\times 0.4$

Plan for next week:

1. STAR magnet reversal (done)
2. Operate Blue closer to the vacuum limit
3. Collimation on ramp
4. LISA parallel steering
5. Landau cavities
